

Title	Fuze box coding	Date	01/10/17
-------	-----------------	------	----------

Starting point:	Programing to say ' hello world '
Target for this lesson?	To have a Github Pages Static Website
Did I reach my target? <i>(add details to "Lesson Review")</i>	Yes I did

Lesson Review
How did I learn? What strategies were effective?
I learnt how to program the fuze box to count down from the total amount of fruits when some are eaten. Use shift instead of caps lock as it was quicker as there were a lot of capitals. The navigator should be clear when speaking as well as it helps to understand it better.
What limited my learning? Which habits do I need to work on?
Try to type faster as you can do more and cover more stuff. Make the navigator say what to write and this will help as it is faster than looking at the book over and over again. Also make sure I don't fiddle with things either as it is really distracting to me and the other in the class.
What will I change for next time? How will I improve my learning?
Save the work on the usb first time round so you won't have to do it again. Also make sure that my partner is doing the right thing and he isn't doing the wrong things or pressing the wrong buttons. Make sure the wires connected to fuze box and is connected properly so it doesn't get out halfway through and loses all the work.
